3. You have extracted given data from a JSON file to create an array. What function will you implement to print the following output:

  ["a1","a2","a3","a4"]

```
import json
 open("input.json") as input_file:
  data = json.load(input_file)
 data = [d["Device Caps"][0] for d in data]
 print(data)
```

```
import json
 with open("input.json"):
  data = json.load(input.json)
 data = [d["Device Caps"][0] for d in data]
 print(data)
```

```
import json
 with open("input.json") as input_file:
  data = json.load(input_file)
 data = [d["Device Caps"][0] for d in data]
```

```
import json
 with open("input.json") as input_file:
  data = json.load(input_file)
 data = [d["Device Caps"][0] for d in data]
 print(data)
```
